OmniMetrics Enterprise BI Dashboard

High-density business intelligence platform for executive decision-making and revenue tracking.

Business Context & Problem

Executives struggle with scattered spreadsheets and stale weekly reports that fail to highlight revenue anomalies or customer churn until it is too late.

Engineered Solution Blueprint

Built a lightweight React dashboard using virtualized tables, optimized SVG chart layers, and responsive CSS grid cards that scale from desktop ultrawides to iPads.

Core Capabilities & Features

- **Executive KPI Cards:** Instant overview of MRR, Net Retention Rate (NDR), CAC, and active user volume with percentage trends.
- **Interactive Multi-Series Charts:** Revenue vs. Churn line charts with hover tooltip inspections, togglable legends, and zoom slices.
- **Customer Cohort Retention Matrix:** Color-coded retention heatmap showing monthly cohort decay over 12-month periods.

Executive KPI Dashboard & 150K Data Point ARR Growth Curve

Technology Stack

React, TypeScript, Recharts / D3, Tailwind CSS, REST APIs, PostgreSQL

Architecture Highlight

Declarative React component architecture utilizing TypeScript for strict metric typings

Challenge: Browser CPU lag when recalculating time-series curves across multiple complex filters.
Solution: Utilized Web Workers to run heavy statistical rolling averages without blocking the UI thread.

06 • EXECUTION PLAYBOOK

Sprint-Driven Delivery Methodology

A transparent, milestone-gated engineering workflow ensuring zero-defect deployments and predictable schedules.

Sprint Phase	Core Focus & Activities	Primary Deliverables	Quality Gate
01 • Discover Sprint 01	**Business problem, goals & scope** We dive deep into your domain, dissect user friction points, and outline measurable functional specifications. No ambiguous assumptions.	Requirements specification, Architecture feasibility audit, Milestone roadmap	**Zero Ambiguity**
02 • Design Sprint 02	**User experience & technical blueprint** We map comprehensive user journeys, craft responsive wireframes, define design tokens, and model secure database schemas.	High-fidelity interactive prototype, System architecture diagram, API contract schema	**Pixel Precision**
03 • Develop Sprints 03–05	**Clean, reliable, scalable engineering** Our engineers write strongly typed, tested, and modular code with modern best practices, continuous commits, and iterative sprint reviews.	Component-driven frontend, Hardened backend APIs, CI/CD pipeline integration	**100% Type-Safe**
04 • Test Sprint 06	**Functionality, security & speed validation** Rigorous cross-browser verification, responsive stress-testing, automated API regressions, and Core Web Vitals optimization.	Cross-platform QA audit, Security & vulnerability review, Lighthouse 95+ performance check	**Enterprise Secure**
05 • Deliver Release	**Production launch & ongoing stability** Seamless deployment to production cloud infrastructure with zero downtime, telemetry alarms, and post-launch maintenance.	Production cloud release, Comprehensive handover docs, Real-time uptime monitoring	**99.99% Uptime**

Client Involvement & Governance Commitments

1. **Weekly Sprint Demos:** Working software demonstrated in staging environments every 2 weeks.
2. **Direct Git / Slack Access:** Transparent commits, direct developer channels, and zero intermediary delay.
3. **Documented Architecture:** Full API schemas, database ERDs, and deployment runbooks handed over upon completion.
