ShieldOps Cybersecurity Awareness Suite

Interactive enterprise security training, threat simulation, and employee risk analytics.

Business Context & Problem

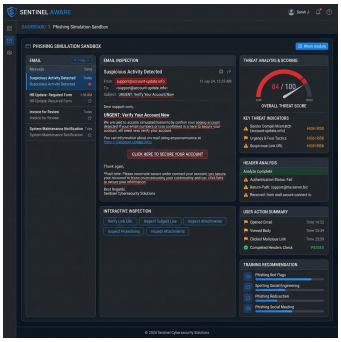

Human error accounts for over 80% of corporate data breaches. Traditional static slide-deck security courses fail to produce genuine behavioral change against spear-phishing.

Engineered Solution Blueprint

Built a multi-tenant React dashboard backed by ASP.NET Core API services with secure data partitioning, audit logs, and gamified security certification paths.

Core Capabilities & Features

- **Simulated Phishing Sandbox:** Interactive sandbox presenting real-world lures (CEO fraud, fake invoices) with inspectable email headers.
- **Departmental Risk Heatmap:** Visual matrix highlighting departments requiring immediate refresher training based on drill failure rates.
- **Micro-Learning Modules:** Bite-sized 3-minute interactive scenarios covering credential theft, social engineering, and ransomware prevention.

Interactive Simulated Phishing Sandbox & Threat Lure Inspection

Technology Stack

React, Tailwind CSS, ASP.NET Core, C#, PostgreSQL, OAuth 2.0 / MFA

Architecture Highlight

ASP.NET Core Clean Architecture with repository pattern and MediatR CQRS

Challenge: Accurately tracking employee interaction without triggering corporate spam filters.
Solution: Configured specialized simulation email headers (X-Simulation-ID) matched with internal whitelist rules.

06 • EXECUTION PLAYBOOK

Sprint-Driven Delivery Methodology

A transparent, milestone-gated engineering workflow ensuring zero-defect deployments and predictable schedules.

Sprint Phase	Core Focus & Activities	Primary Deliverables	Quality Gate
01 • Discover Sprint 01	**Business problem, goals & scope** We dive deep into your domain, dissect user friction points, and outline measurable functional specifications. No ambiguous assumptions.	Requirements specification, Architecture feasibility audit, Milestone roadmap	**Zero Ambiguity**
02 • Design Sprint 02	**User experience & technical blueprint** We map comprehensive user journeys, craft responsive wireframes, define design tokens, and model secure database schemas.	High-fidelity interactive prototype, System architecture diagram, API contract schema	**Pixel Precision**
03 • Develop Sprints 03–05	**Clean, reliable, scalable engineering** Our engineers write strongly typed, tested, and modular code with modern best practices, continuous commits, and iterative sprint reviews.	Component-driven frontend, Hardened backend APIs, CI/CD pipeline integration	**100% Type-Safe**
04 • Test Sprint 06	**Functionality, security & speed validation** Rigorous cross-browser verification, responsive stress-testing, automated API regressions, and Core Web Vitals optimization.	Cross-platform QA audit, Security & vulnerability review, Lighthouse 95+ performance check	**Enterprise Secure**
05 • Deliver Release	**Production launch & ongoing stability** Seamless deployment to production cloud infrastructure with zero downtime, telemetry alarms, and post-launch maintenance.	Production cloud release, Comprehensive handover docs, Real-time uptime monitoring	**99.99% Uptime**

Client Involvement & Governance Commitments

1. **Weekly Sprint Demos:** Working software demonstrated in staging environments every 2 weeks.
2. **Direct Git / Slack Access:** Transparent commits, direct developer channels, and zero intermediary delay.
3. **Documented Architecture:** Full API schemas, database ERDs, and deployment runbooks handed over upon completion.
